GREETING.

In presenting our Catalogue for 1894, a few words of explanation would, perhaps, be acceptable to my former patrons. I will briefly state that more capital became necessary in running the business, which had so increased in proportions that I was unable to handle it alone, and, therefore, all matters were placed in the hands of The Rogers Nursery Company. As Manager of this company, I am here to serve all even better than before; and with increased facilities and larger assortment, we are prepared to offer you good stock, prompt shipment and satisfaction throughout.

ISAAC C. ROGERS, Manager.

Terms and Advice.

Cash with Order or Before Shipment. This has always been our rule, and will be found more satisfactory, both to us and our customers.

Remit by Money Order on Morristown, N. J., Registered Letter, Post-Office or Express Money Order. Money sent in other ways will be at risk of sender. As a safe, prompt and cheap method of sending money, we would especially recommend the Post-Office Money Order where it can be had, and money can be sent in this way at our expense. One to five days will be saved over sending by Registered Letter.

C. O. D. Goods will be sent C. O. D. only when one-fourth of the purchase money is sent with order, and purchaser must in all cases pay charges by express company for return of money.

In ordering, please place order on separate sheet from body of letter. Use our Order Blank whenever possible, as this will save us time and trouble, and will greatly facilitate prompt dispatch of order.

No charge for boxing or delivery to freight station.

Our stock is true to name and carefully labeled, and every care is taken to keep it so, but should any prove otherwise, we will replace it with other stock or make it satisfactory—claims not to exceed cost of goods. We guarantee satisfaction. Upon your satisfaction depends our success.

Shipping Season. Our spring season begins as early as we can ship with safety to points in this latitude, usually about March 1st; but to Southern patrons we can ship at mild times during the winter.

Former prices are set aside by those in this Catalogue.

Paying the Freight. For the past two years we have prepaid the freight on all orders amounting to $10 to points east of Chicago and St Louis, and north of Nashville, Tenn.; and while it would be our wish to continue this, we find it impracticable, from the fact that we cannot pay through on many of the railroads, and the agents of the railroad companies frequently send freight bills on to customers instead of charging them back to us, which gives the impression that we do not live up to our word. As this has caused some misunderstanding and hard feelings, we have concluded to reduce our prices to more than balance the freight charges, and let each one pay the freight on his own order (See our special offer on club orders).

Prompt delivery will be our motto, but in order to carry this into satisfactory execution we must have the help of our patrons. This can be explained in two words—Order Early. Do not wait until ready to plant, and then send in your order with directions to ship on next train—"ground waiting". If yours was the only order, we could probably do this; but with hundreds of others coming in at the busy season, each must wait its turn.

ORDER EARLY.
Fruit Trees.

When to Order. Order early, and have trees come by freight. Shipping by express is expensive business. We can pack trees to carry any distance, and they will remain in good condition for weeks, especially early in the spring.

Do not wait until the ground is ready and then send order—DO IT NOW. It is very easy to "heel them in" until ready to plant. We will ship as soon as the weather is favorable, if you desire.

Hints.

Should trees arrive in freezing weather, or while frozen, do not unpackage, but leave in the cellar, or cover well and allow to thaw out gradually. When conditions are favorable, unpackage, "heel" or trench them, and plant as soon as possible.

In planting, dig holes wider than is necessary, merely to accommodate the roots. Throw top-soil on one side of the hole and subsoil on the other, and in filling in, place the good soil, well-pulverized, next to the roots, first being sure that the roots are not tangled. Tread soil well around the roots until they are covered, and until hole is nearly full, then leave soil loose for a few inches on top. Plant tree a little deeper than it grew, excepting dwarf pears, which should be put down deeper. Cut back all limbs close to body of tree, excepting one, to be left as a main shoot or leader.

"Whole-Root Trees." It may be of interest to some of our customers to know that all our trees this year are on whole roots, strong and thrifty. We are not, however, prepared to claim any superiority on this account, and make no extra charge.

If you plant

Pears for Profit.

Forty Thousand Thrifty Western New York Grown Pear Trees.

The Best in the World.

Our Pear trees are all grown for us in Western New York, where the best Pear trees in the world are raised. They are carefully handled, and come to us by the car load, direct from the best growers.

Do Pears pay? Yes, they pay better than any other tree fruit, and are as easily grown as apples. Bring twice as much in market, and three times as many trees can be planted on an acre.

The leading varieties for profit are Clapp's Favorite, Bartlett, Kieffer, Beurre de Anjou and Flemish Beauty standards, and Duchess dwarf.

Prices of Leading Standard Sorts.

Varieties marked with a star (*) can be supplied in Dwarf.

Wilder Early and Idaho. New and highly recommended. 40 cts. each, $4 per dozen.

*Bartlett. The leading summer or second early Pear, and one of the most popular Pears grown. Large, yellow, juicy and excellent. Tree a thrifty grower and early bearer.

*Beurre de Anjou. Ellwanger & Barry claim that this is the finest winter Pear, and the claim is well founded. In this section and further south it ripens too early to keep late in winter, but in most sections it is just what is wanted. Large, russet yellow, red cheeked, fine flavored, and of excellent quality.

Kieffer. The thriest and most handsome grower of all Pears. For growing in New Jersey and on light soils underlain with clay, the Kieffer Pear has no equal as a money crop among Pears. New Jersey, Delaware, Maryland and Virginia seem particularly adapted to growing the Kieffer, while on the

Page 13
heavy soils of other states, and farther north, where it does not have time to ripen, it is not so profitable as other sorts. The section where Kieffer can be successfully grown is very limited in comparison to the extent of country in which it finds a market, and it is doubtful whether the cry that has been raised for seven years back, of "too many Kieffers," will ever be realized. In spite of the increased planting and increased crops, the prices were never better for Kieffer than the past year. This is partly due to the fact that it is so easily shipped, and an excellent canning Pear, making the market absolutely unlimited. In planting a large block of Kieffer, put in about 10 per cent. Le Conte to fertilize the blossoms. This simple precaution will add greatly to crops and profits.

Clapp's Favorite.* The largest and best early Pear in America to-day. Fruit large and delicious, pale yellow, with a handsome, bright red cheek. Very fine grained, and the best quality large early Pear. Tree a strong grower and heavy bearer. Among the profitable Pears the Clapp's Favorite stands next to Kieffer, and succeeds where Kieffer will not. It ripens very early, and, being the largest early Pear, commands the best prices. A large fruit grower says Clapp's Favorite is his best Pear, but he is just beginning to realize it. A few years ago a tree agent induced him to try the Clapp's white, juicy; a rampant grower; early, annual and prolific bearer; popular at the south. Valuable to plant among Kieffer as a fertilizer.

Howell.* Rather large; pale yellow, with a red cheek; good quality; very popular and profitable; a young and regular bearer.

Louise Bonne de Jersey.* Large; greenish brown; juicy, melting, rich; now being largely planted.

Manning's Elizabeth. Small; yellow, with bright red cheek; good quality; good table sort, a fine grower and heavy bearer; reliable and profitable.

Sheldon. Of the first quality; large; russet and red; rich and delicious; tree vigorous, erect, handsome; largely planted.

Seckel.* Small, but of the finest flavor of any; very desirable for table use.

Duchess d'Angouleme.* Very large, dull yellow, juicy, vigorous; does best as a dwarf. Mid-autumn.

Buffum. Medium, oblong-ovate; deep yellow, shaded red; juicy, very good. Late autumn.

Summer Doyenne (Doyenne d'Ete). A beautiful, melting, sweet Pear, rather small. Tree a vigorous grower and good bearer. Ripens first of August.

Osband Summer. Medium, yellow, with red cheek; half melting, mild and pleasant; fine flavor, excellent and productive.
Peach Trees.

Small Trees.—It is a mistake to think large trees are the best. Small or medium-sized trees are taken up with plenty of fibrous roots—in fact, all or nearly all the roots the tree ever had, and are not seriously checked when transplanted, but are ready to go right ahead growing, while the roots of a large tree are more or less injured in digging, and have fewer fibers. Of course we do not recommend a poor, little, unhealthy tree, but a thrive, medium-sized tree, ready for business. Plant peaches 10 feet apart each way.

Large planters and those at a distance will find there is great economy in the small trees. Of course, they do not look so large when first planted, but this is not a serious matter, as when the bearing time comes the little fellows will have grown fully as large as others, and will be ready for work.

*Alexander,* or *Amsden’s June.* Medium to large; deep, red cheek; sweet, juicy.

*Mount Rose.* Large, bright red; flesh white, juicy, excellent.

*Foster.* Large; deep orange-red; flesh yellow, very rich and juicy.

*Crawford Early.* A magnificent large yellow Peach.

*Old Mixon.* Large, red-cheeked; flesh white, rich.

*Reeves’ Favorite.* Very large; yellow, with red cheek. This variety is one of the finest Peaches grown.

*Elberta.* Large; yellow, with red cheek; juicy, and high flavor; flesh yellow and free. An excellent shipping variety.

*Stump the World.* Very large; white flesh, bright red cheek.

*Crawford’s Late.* A superb Peach; yellow, with red cheek; very large; of good bearing habit; one of the best varieties.

*Ward’s Late Free.* Large size, red-cheeked; flesh white, melting, juicy, excellent.

*Chair’s Choice.* One of the largest; yellow; excellent market variety.

*Globe.* Large to very large; yellow; juicy, excellent.

*Beck’s Smock.* Large, yellow, one of the reliable; desirables for canning.

*Ford’s Late White.* Large, finest white; flesh juicy; excellent for canning.

Additional sorts: *Keyport White, Newark Seedling, Steadly, Brandywine, Susquehanna, Reed’s Golden, Lovett’s White and Fox’s.*

Champion Peach. (See next page.)
Our Big 3 in Peaches.

CROSBY, CHAMPION and ELLISON.

Ripening EARLY, MEDIUM and LATE.

These are the greatest Peaches ever introduced. All hardy, frost-proof, sure-crop Peaches.

CROSBY. Claimed to be the best quality Peach in America, and the most popular hardy freestone Peach and the surest bearer. It has borne its eleventh successive crop in New Hampshire, and June-budded trees bore fine fruit in Georgia the next year after planting. Fruit medium sized, yellow, splashed and striped with bright crimson. Flavor a mild subacid Flesh firm and free. Ripens mid-season.

CHAMPION. The earliest white hardy freestone Peach. Originated at Nokomis, Ill., where it has borne full crops for a number of years in succession, withstanding the severest weather, 40° below zero, without injury. Fruit large, creamy white, handsome, rich, juicy and sweet. (See page 3.)

ELLISON. The Ellison Peach is as hard as an oak, and is well adapted to growing in cold climates, but is valuable in any location. Its great hardiness and late blooming make it especially desirable in withstanding the late frosts which have been so destructive to other varieties of Peaches the past few years. Even the oldest of the Ellison Peach trees are strong and healthy and free from the attacks of disease, and bear nearly every year—in fact, for nine years in succession they have borne full crops of fine Peaches, during which time there were but three full crops of other Peaches, and in four out of the nine years no other varieties bore a Peach, while the Ellison bore its usual large crops. The Ellison is a beautiful yellow Peach, large as Late Crawford, and a little earlier. The flesh is yellow, firm and of excellent quality. So popular has this Peach become that the originator, Robert Ellison, of Ohio, has had inquiries from every state in the Union in reference to it.

Prices of strong June buds of each of the above Big 3, 25 cts. each; 1 each, or 3, for 60 cts.; 6 for $1, by mail or express. Larger trees, by express or freight, 35 cts. each, $3.25 per dozen.

Are “Peach Trees” always “Peach Trees’”?

To the inexperienced, “Peach Trees” are “Peach Trees,” no matter where grown, by whom, or whether pure and true to name or not, and the “lowest price” is the only consideration with them; but the CAREFUL BUYER knows where he buys his trees, and where the trees are grown. They must be true to name, free from “yellows” and the fatal “root knot,” and grown in a favorable locality, for he knows the superiority of such trees. It is the wants of these CAREFUL BUYERS we are prepared to meet.

We know our prices are higher than some who will offer you their trees, but with our trees goes the guarantee that they are free from these diseases, and that there is no more favorable locality in the United States for growing Peach Trees than where our trees are grown, and not only “grown,” but grown and cared for by honest, careful and conscientious workmen, whose aim is not only to grow a good, thrifty, healthy tree, but to look carefully to the purity of the stock. Trees so grown are worth more, and it costs more to keep them so.

Are YOU A CAREFUL BUYER?

Russian Apricots.

Profitable in many sections, and very successfully grown in New York and many of the western states. Entirely hardy.

Alexander, Alexis and J. L. Budd. The leading sorts. Strong trees, 2 to 3 feet, 15 cts. each, $10 per 100; larger trees, 25 cts. each.
STANDARD CHOICE VARIETIES OF PLUMS.

Prices: First-class, 4½ to 6 feet, on plum roots, fine trees, 25 cts. each, $2.50 per doz., $17.50 per 100.

**Beauty of Naples.** The finest of all yellow Plums. Originated at Naples, N. Y. Very hardy and productive. Fruit is of large size, greenish yellow, somewhat striped, very sweet, excellent flavor, thin skinned and one of the finest for table use. Highly endorsed by leading Plum growers, and adapted to a large part of the country.

**German Plum.** Medium size, oval; purple or blue; juicy, rich, fine; tree vigorous and very productive. It is one of the best, and is largely sought after, and sells at very high prices. We have the genuine German Prune, which is not easy to get, as many, by mistake, send out for it the French Prune.

**Imperial Gage.** Rather large, oval; greenish; flesh juicy, rich and delicious; parts from the stone. Tree a vigorous grower, very productive, and one of the best of Plums.

**Lombard.** Medium size, oval, violet-red; flesh yellow, juicy and pleasant; tree very vigorous, a great bearer, and peculiarly well adapted to light soils. This is the popular market Plum. Of all older varieties, the Lombard has done the best. It has borne immense crops annually of beautiful specimens, delicious to eat out of hand, for dessert, or preserves.

**Bradshaw.** A very large and fine early Plum; dark violet-red in color; juicy and good; tree erect and vigorous; very productive. A very valuable variety for market.

**Shropshire Damson.** Of medium size, dark purple; very productive; especially valuable for preserving. This is perhaps one of the most popular of our old standard varieties. Our patrons speak very favorably of it.

**Yellow Egg.** A very large and beautiful egg-shaped yellow Plum; a little coarse, but excellent for cooking. The tree is a free grower, and very productive.

**Wild Goose.** (True.) Large, rich crimson, beautiful; flesh soft, melting, rich, delicious, with a full, fruity flavor; tree a strong grower and very prolific.

**Shipper’s Pride.** This large, round purple Plum is recommended for its certainty to produce a large crop of fruit, for its fine appearance and superior shipping qualities.

**Pond’s Seedling.** Very large, yellowish, nearly covered with bright red; flesh juicy and sugary; vigorous, abundant bearer.

**Spaulding.** Claimed to be curculio-proof. Fruit medium size, yellowish green, very sweet and rich; tree a vigorous grower. One-year trees of this variety on peach stock, only 25 cts. each.

**Quinces.**

On moist, deep soil, heavily manured and well cultivated, the Quince is a paying crop. Salt and potash are valuable fertilizers, and heavy mulching is a great benefit.

**Orange.** The “Quince for the million,” and in most sections the only variety raised. 3 ft., 25 cts. each, $2.50 per dozen.

**Meech.** (New.) This is a great variety in some sections, but does not succeed over as wide a range as the Orange. Large and of excellent quality. 35 cts. each, $3.50 per dozen.

**Champion.** From our own experience with Champion on our soil, we thought this variety of little value, but we are glad to know it is not so in all sections. Bears very young; in fact, tiny whips in nursery rows are sometimes bent over with a fine, big Quince. A very good cropper. 3 to 4 ft., 30 cts. each; $3 per dozen.
Cherries.

Have you a dry hillside or old sheep pasture too hilly or too rough to farm? This is just the place to plant Sweet Cherries, by making a small protection around each tree to keep sheep or cattle from eating the trees for a few years, and they will soon care for themselves and pay better than the sheep.

Cherries are the first fruit in market excepting the strawberry, and always command good prices for a good article. Farmers and fruit-growers are planting Sweet Cherries along their roads, in pastures, on lawns, along fences, etc., and the best Sweet Cherries seem to come from just such uncultivated spots. They afford valuable and beautiful shade, and require but little care except occasional trimming and keeping out black-knot.

Never plant Cherries on low wet soils. They succeed best on a dry soil, such as a hillside. Single trees often produce $40 to $50 worth of Cherries in a season.

Cherries are of Two Classes, Hearts and Bigarreaus, and Dukes and Morellos. The first, called Sweet Cherries, are strong, upright growers, and adapted to planting for shade. The Dukes and Morellos, or Sour Cherries, are smaller growers, with spreading, low-branched tops, and make the most beautiful dwarfs. The following are the leading varieties for profit:

**Napoleon Bigarreau Cherry.**

**DUKE and MORELLO CHERRIES (Sour).**

| Chase Brothers, of Rochester, N. Y., think very highly of the Schmidt's Bigarreau, and say it is the most profitable Sweet Cherry. They speak of it as follows: "Schmidt's Bigarreau is of immense size; rich, deep black; flesh dark, tender, very juicy and firm; finest flavor. Bears abundantly, good shipper, and the best late black Cherry." Another large fruit-grower says: "I saw the Schmidt's Bigarreau in bearing the past season. It was the most beautiful sight of the kind I ever saw. The trees were loaded with large, handsome, luscious fruit, which was selling at fancy prices. It is the best Cherry, all things considered, I ever saw."

**Napoleon Bigarreau.** Large, pale yellow, with bright red cheek. The leading light-colored sweet Cherry. One of the best. Try it.

**Governor Wood.** Large, light yellow, nearly covered with red. One of the finest. Strong grower and very productive.

**Windsor.** Large late; liver colored; firm and of fine quality.

**Black Tartarian.** Strong upright grower, fruit large and heart-shaped. Bright, shiny black.
THE DWARF ROCKY MOUNTAIN CHERRY (Hardy).

Before offering this fruit to our customers, we made it a point to learn further about it than the descriptions given by other nurserymen offering it. From what we can learn it is a valuable fruit, to be grown as currants are, the trees being very dwarf, seldom growing over 4 feet high. The fruit is as large as the Early Richmond or Morello Cherries, and does not ripen until very late. The tree itself, and especially when in full bloom, is very ornamental, and will be and is being planted largely in parks for its ornamental value. For this purpose $5 and $10 per single tree have been paid. The tree is perfectly hardy, having stood the severest weather of Dakota and further north without injury.

It has been more largely grown by Chas. E. Pennock, of Colorado, than any one else, and he speaks of it as follows: "It is the most productive fruit of which I have any knowledge. I have picked 15 quarts of fruit off a 3-year-old bush. I have picked 80 cherries off a branch 12 inches long of a 2-year-old bush. The fruit is jet black when ripe, and in size averages somewhat larger than the English Morello, the season of ripening being after all others are gone. In flavor it is akin to the sweet cherries, and when fully ripe, for preserves or to eat out of hand, it has no equal in the line of pitted fruits, and is conceded superior to any fruit grown in this section. It has the best system of roots of any shrub or tree I have ever planted, which accounts for the wonderful productiveness of plants at such an early age. It bears every year, and is as prolific as a currant bush. Grows to a height of 4 feet, and has never been affected by insects, black-knot or other disease. In addition to its immense productiveness of luscious fruits, valuable for pies, sauce or for market purposes, it makes a handsome flowering bush, with its mass of pure white flowers. Some planters, where its good qualities are known, will set them by the 100 and 500 in spring."

They begin to bear luscious Cherries the second year planted, and are much sought after for parks, lawns, gardens and as market crops on farms. As ornamental trees or for hedging there is nothing more delightful in their line from the time they blossom in May until, the fruit ripens in August.

Price: 35 cts. each, 4 for $1, by mail or express. Dozen, $2.50. Strong 2 and 3-year bushes.

We would suggest that every one try the Dwarf Rocky Mountain Cherry, as it will no doubt prove valuable. Special quotations by the 100 or 500.

THE HARDY TRIFOLIATE ORANGE.

This is the most hardy of the Orange family, and will stand our northern climate with little or no protection, and is also desirable for pot-culture. In the parks of both New York and Philadelphia it is growing luxuriantly, and blooming and fruiting profusely. You can have an Orange tree growing, blooming and fruiting on your lawn. It is a dwarf, of low, symmetrical growth, with beautiful, glossy green leaves, and an abundance of large, white, sweet-scented blossoms. The fruit is small, bright orange-red in color, having a peculiar flavor, of no value for eating; though it may prove useful in making a lemonade, as the fruit is as acid as a lime. The fine appearance of the plant, with its constant habit of blooming, and showy fruit, combine to make a plant of peculiar value and beauty. It is a conspicuous and attractive object in any shrubbery or pleasure ground, and is best suited for open ground culture, as it is deciduous and drops its leaves in the fall, and cannot be induced to make much growth in winter, even in a greenhouse, though it will not drop its leaves if kept from frost. It blooms very profusely in spring and early summer, but after the fruit begins to form, blossoms are not plentiful. Our cut represents a young tree, about four feet high, as it appears when in bloom and when in fruit, but the flowers and fruit do not appear together to the extent there shown. The fragrance produced by a tree in bloom can be appreciated only by those who are familiar with the delicious perfume of the orange blossom.

Price, 2 years, 1 to 2 feet, by mail or express, 20 cts. each, $2 per doz., $15 per 100; 1 year, 8 to 10 inches, by mail or express, 15 cts. each, $1.50 per doz., $10 per 100.
Nut Trees.

Nut culture is now attracting more attention than ever before, on account of the great profits derived from a small area. Single trees produce $25 to $50 per year, and when planted largely the profits are enormous. Although it is a few years before they come into bearing, it pays to wait. If varieties are properly chosen and carefully planted, the time is somewhat lessened.

There's Money in Nuts.

**CHESTNUTS.**

Do not plant on low, wet soils.

**Numbo.** Very hardy; productive; bears very young; nuts large, best quality; ripen early, and sell at high prices. Finest of all, being large and good. Grafted, $1 each; large trees, $1.50 to $2 each.

**Spanish Chestnut** is a handsome, round-headed tree, of rapid, spreading growth, that yields abundantly of large nuts of good quality, hence a desirable ornamental tree or profitable for market. 3-year, 25 cts. each, $1 per 6; 3 to 4 ft., 30 cts. each.

**Japan, or Giant.** Introduced from Japan. The tree is ornamental, hardy and productive, of dwarf habit, and bearing very young. The nuts it bears are of enormous size and of much better flavor than the old and well known Spanish variety. 30 cts. each.

**American Sweet.** A valuable native tree, both useful and ornamental; timber is very durable, and possesses a fine grain for oil finish. Nuts sweet, of delicate flavor, and are a valuable article of commerce. 3 to 4 ft., 30 cts. each.

WALNUTS.

The Walnut is not only very valuable as a timber tree, but the nuts it bears in great profusion find a ready sale, these two qualities rendering the planting of the tree a profitable investment.

**American Black.** The common black Walnut, the wood of which is so valuable, while the nuts are always desirable, and find a ready sale. 20 cts. each, $1 per 6.

**Japan Walnut.** From Japan. Shell thick and hard; kernels small, sweet and rich, 30 cts. each.

**The English Walnut, or Persian Walnut.** (French or Madeira Nut.) The well-known English Walnut (*fugans regia*) is a native of Persia, and was introduced from there into England over 300 years ago. It is also known as the French or Madeira Nut. It is as valuable a nut as can be grown. The owner of an orange grove in Florida declares that English Walnut trees pay as well as his orange grove, which nets him $1,060 per acre yearly. 3-year, old, thrifty trees, 25 cts. each, $2.50 per dozen, $12 per 100; large trees, $1 each.

**English Filbert.** This is of easiest culture, growing 6 to 8 feet high; entirely hardy, and one of the most profitable and satisfactory nuts to grow, succeeding on almost all soils, bearing early and abundantly; nuts nearly round, rich, and of excellent flavor; admired and appreciated by all bon vivants for the dessert. 20 cts. each, $1 per 6.

**Almonds.** 3 to 5 ft., 25 cts. each, $2 per dozen.

**Pecans.** A beautiful, symmetrical and rapid-growing tree, of luxuriant foliage, which it retains late in the fall; produces valuable timber and heavy crops of sweet, oblong, smooth nuts, of very good quality. Strong young trees, 25 cts. each.

Try a Few for Pleasure.

**JAPANESE RASPBERRY.**

*(Child’s Wineberry)*

This is a very ornamental plant, both winter and summer, with its red barked branches and graceful form. Valuable as an ornamental shrub, and planted as a novelty for the fruit. 20 cts. each, 6 for $1.

“It’s Pretty All Winter.”
Our Plants are freshly dug.

**Small Fruits.**

Strawberries.

Our list of Strawberries, though not comprising a round hundred sorts, as some others do, contains, as heretofore, the best of the varieties now under cultivation, and being of limited proportions, necessarily contains few poor ones, or, as we are glad to say, absolutely not a poor one on the list!

**Perfect and Imperfect Blossoms.** In the following collections the varieties marked P are pistillate or imperfect-flowering, and must have a perfect-flowering sort planted near them to pollinize the blossoms. In planting these, every third or fourth row should be a perfect-flowering sort, planted to furnish the pollen. It is well to have an abundance of perfect blossoms, especially in a wet season, when the pollen does not carry.

**The Original Big 4.**

**Bubach, Haverland, Warfield and Michel's Early.**

Our Original Big 4 has become widely known and very popular. These four varieties still hold, and are likely to continue to hold, a prominent place among the leading standard sorts.

**Bubach No. 5.** (P.) As a profitable berry for a nearby market, the Bubach has few equals. We might tell its good points by first telling a few of its weak ones. It is not to be recommended for shipping long distances, but is sufficiently firm to make it a first-class berry for ordinary marketing. Another weak point is that it does not make sufficient plants to allow nurserymen to supply the heavy demand for them. The plants are very large and strong, and although they make a bed somewhat narrower than the rampant Crescent, they are about the right thickness to produce the finest berries, and plenty of them. 25 cts. per doz., 75 cts. per 100, $3.50 per 1,000.

**Haverland.** (P.) It is a beautiful sight, at picking time, to look into or among plants of the Haverland, with the large, long, bright berries apparently covering the ground, giving one the impression that they could be gathered up by the handful. Fruit is long, conical, even in form, bright color, fairly firm when not too ripe, good size and fine quality. Plant is a strong grower, of upright, even growth, and makes good beds. Although not as early as Michel's Early, it is one of the best early varieties in existence. 25 cts. per doz., 60 cts. per 100, $3 per 1,000.

**Warfield.** (P). The good shipping qualities of the Warfield will make it a profitable sort for those depending upon markets at a distance. Fruit is medium size, very firm, regular in form, slightly necked, dark glossy red, and holds color well. We think the Warfield has enough good points to make it worthy of continued cultivation, and is far preferable to many of the sorts now grown and being introduced. We have restored the Warfield to its place among the Original Big 4 upon the suggestion of several of our patrons, who consider it a better paying berry than Parker Earle, and, taking all together, one of the very best berries they have ever tried on light or heavy soil. 25 cts. per doz., 60 cts. per 100, $2.75 per 1,000.

**Michel's Early.** This has perfect blossoms, and is the fertilizer of the Big Four. Many and conflicting are the reports about Michel's Early, but in most cases we hear nothing but good words for this little fellow, the very earliest of the early, and of the best quality. Fruit runs small toward the end of the season, but with this exception it surprised us by the uniform good size of fruit and the number of quarts produced, which, on account of extreme earliness, brought fancy prices. It has a tendency to grow too thick, and a good thinning out of the plants will increase the size of fruit.

To show how well it is thought of by others, we quote from the Strawberry Culturist: "Michel's Early for the past two years has been the most popular early berry, and we think it will be largely grown for years to come. There is no earlier variety grown, and the fruit is of large size and delicious flavor."

25 cts. per doz., 50 cts. per 100, $2.75 per 1,000.

**SPECIAL OFFER.**

We will mail 12 each of the Original Big Four for 75 cts., 25 each for $1.25, 50 each for $2; or, by express, 100 each for $2.
SELECT LIST OF STRAWBERRIES.

Gandy. During the past two hot, dry Strawberry seasons, the Gandy was very popular and profitable. It is firm enough to stand the burning sun. The calyx is large, and remains fresh a long time, making it a very attractive berry in market. The fruit is of large size, very firm, bright crimson, showy and of good quality. Although it is not a heavy cropper, the berries sell at fancy prices late in the season, and the net profits make a handsome showing. Plant is a strong grower, sending out very long runners. Blooms perfect. We think enough of the Gandy to recommend it for the Big Four instead of Michael’s Early, where a late berry is more profitable than an extremely early one. The Gandy blossoms very late, and will not do to fertilize early-flowering sorts like Bubach, etc. 25 cts. per dozen, 60 cts. per 100, $3 per 1,000.

Parker Earle. Not long since, the writer was thinking about the Parker Earle, and hardly knew what to think, when he accidentally noticed the following from a prominent Strawberry grower, and as it seems so appropriate, “will place it right in here”: “I hardly know where to place the Parker Earle. It is a remarkably productive berry, but very uncertain. If your readers could see it in some places, they would not want it; and if they could see it in others, they would say, ‘It is just what I want.’ On some low, wet land it was remarkable, and on dry land there was nothing but blight. If you have a good, moist piece of land it will please you, if not, it won’t, or that is my experience.”

Parker Earle made very little growth the past season, and plants are very scarce. 30 cts. per dozen, 75 cts. per 100, $6 per 1,000.

Miner’s Prolific. “The Miner’s never fails on heavy soil.” These are the words and this is the opinion of prominent berry growers. This old variety seems still to claim recognition as a profitable standard sort, being a sure cropper and very productive on heavy, moist soil. Berries average good size, fair quality, and it is valued for its very dark color. 25 cts. per dozen, 50 cts. per 100, $2.50 per 1,000.

Lovett. Introduced by J. T. Lovett, and the best berry he has ever sent out. It has already made a place for itself among the leading standard sorts.

M. Crawford, of Ohio, speaks of the variety thus: “The Lovett succeeds well everywhere, and it may be planted with confidence either for home use or market. It belongs to a class of productive, hardy varieties, and seems to have no weak point. It has a tough, healthy plant, perfect blossoms, and is one of the most prolific. Fruit is of good size, and plant is so vigorous that it maintains its size better than most varieties. The form, color and flavor are all right, and I think all will be pleased with it. Season medium.” The Strawberry Culturist says: “Lovett ripens mid-season; firm, productive and of good size. A valuable sort for fruiting, pistillate sorts, such as Bubach.”

We think well of this variety, and have planted largely of it. 25 cts. per dozen, 50 cts. per 100, $2.75 per 1,000.

Parry. The past two years have been severe tests on all varieties of Strawberries. Many of the newer as well as the older varieties than Parry, that had before made an appearance of overshadowing this excellent variety, have been dropped from the list by those who plant for profit, while the Parry has been reserved, and will be planted more largely than ever before. This speaks for the merits of the berry. Fruit is large, fine form and good color. Berries run large to end of season, and are the best of quality. 20 cts. per dozen, 45 cts. per 100, $2.50 per 1,000.

Timbrell. (F.) This berry comes well recommended by those who have tested it. We are well pleased with its habit of growth, but have not yet fruited it. Said to be very large, of fine flavor and a heavy bearer. Blossoms pistillate. We would recommend every one to try at least one or two dozen of the Timbrell. Our stock is genuine. $1.50 per dozen, $7.50 per 100.

Greenville. (F.) At the Pennsylvania State Experimental Station the Greenville was placed at the head of the list, and in many places it has done very well. Berries large and of good quality, rather soft, but good for local market. Season medium to late. 75 cts. per dozen, $1 per 100.

Beebe. Everybody wonders why the introducer of this valuable berry changed his mind about its good points after selling large quantities of it; but this has had little effect on the Beebe. It is still being raised just the same, and is really a good berry. Fruit is very large, and a good, firm berry—not soft at all, as has been said, perhaps with the best intention only, but it is a mistake. The Beebe is firm, and holds its shape well when canned. The impression that it was soft was made from the fact that it “bleeds” or stains the boxes when handled, but not to any detriment. It is no trouble to get berries 6 to 7 inches in circumference. 60 c. per dozen, $2 per 100.

Barton’s Eclipse. (F.) This is a fairly good berry in some sections, being a good bearer of fine, large berries. Strong-grover, but a little inclined to rust. 25 cts. per dozen, 50 cts. per 100, $3 per 1,000.
Hayes’ Prolific, or Frost-Proof Strawberry.

Late Frosts Don’t Count Any More!

Each year the strawberry crop in some section of the country is partly or entirely destroyed by late frosts, and in fact, in some localities the strawberry growers have become almost discouraged on this account. The plants blossom out in profusion, giving great promise of fruit, and then, when prospects seem brightest, Jack Frost pays his visit, and before he goes leaves each blossom with a “black eye,” and the discouraged fruit-grower wishes he was in some other business. It was in just such a case as this that the merits of the Frost-Proof Strawberry were discovered. Farmer Hayes, after finding the seedling among his Cumberlands, increased it until he had quite a bed ready for fruiting. That year a heavy late frost ruined his entire crop, as he thought, but to his surprise his seedling, the Frost-Proof, came out unharmed and produced a heavy crop of the finest berries, while Bubach, Crescent and several other varieties side by side were so badly injured that none of them bore anything worth mentioning.

The blossoms of the Frost-Proof are pistillate, and seem harder than any other sort. The plant is a very strong grower, with large, healthy leaves on long upright stems, serving as a great protection to the blossoms, which are so covered that from a little distance one would think they made no show for fruit and this, together with the peculiar hardness of bloom, has given them the name of “Frost-Proof,” which is very appropriate.

Other Merits. Aside from the frost-proof qualities of this valuable variety, it is a berry worthy of the consideration of fruit-growers in every section where a large productive, very late berry is required (and where is the section that does not need one?). The Gandy is a good late berry, but the Frost-Proof will produce three times as much as the Gandy, and continues picking after it and other varieties are gone and dried up. The fruit is large, bright red, very firm, of good quality, and excellent for canning.

The past season was a very trying one on late strawberries, but the Frost-Proof was not in the least injured, as after all other varieties in this section were done picking and dried up, the originator invited several fruit-growers and nurserymen to call and inspect its good qualities. There, on those plants, during that trying dry weather, under ordinary cultivation, was the greatest show of fruit ever witnessed at late in the season. Berries still averaged good size, and showed no effects of the severe weather and hot sun. Late berries always sell well, and the Frost-Proof cannot help but be a valuable and standard late variety when it becomes better known.

THE ORIGINATOR’S HISTORY AND DESCRIPTION.

The Hayes’ Prolific or “Frost-Proof” Strawberry was a chance seedling discovered in an old bed of Cumberland Triumph on my fruit farm near West Chester, Chester county, Pa. It was so different in growth and so much better that, after some fruiting, I removed it to a row by itself. The next season it fruiting again, and all who saw and ate the berries pronounced them very fine. The plants were afterwards removed to Alfred W. Leeds’ farm, near Moorestown, N. J., where they have been fruiting, and last year beat their former record, both in growth and quantity of berries, notwithstanding the unfavorable season.

The fruit is large, of good shape, bright red, fine flavor, very firm, and an excellent shipper. Does not run so small toward end of season as other sorts. This plant is a very strong grower, and the foliage grows well above the blossoms, protecting them from frost. This variety, growing side by side with Bubach, Crescent and several other sorts on my Pennsylvania fruit farm, was not injured by the late frost, while other varieties were badly damaged.

Alfred W. Leeds says: “I grew the Hayes’ Prolific or Frost-Proof Strawberry the past season, and was very pleased with it. I shall plant largely of it the coming season. The plant is a strong grower, and will produce equal to anything I have ever raised. The fruit is of large size, and holds up to the end of the season. Ripens late. The foliage grows well up above the blossoms, which makes a great protection from frost.

William Parry, Parry, N. J., says of Frost-Proof: “It is a good grower, very productive and valuable. The fruit is large, well shaped and of a bright red color. Very late.”

S. C. DeCon. of Moorestown, N. J., says of it: “The plant is a strong, healthy grower, and bears abundantly of good-sized berries, and holds its size well out well to end of picking.”

Prices of Hayes’ Prolific or Frost-Proof: $3 per dozen, 25 plants for $5. No more than 50 plants sold to any one person.

NOTE. In order to be able to offer this variety, we are obliged to pay a heavy royalty on all plants, and these prices are the lowest at which they can be sold.
Rogers' Big 4 "Jr."

ALL HAVE PERFECT BLOSSOMS. (See Catalogue Cover.)

ENHANCE, WOOLVERTON, GOVERNOR HOARD, SAUNDERS.

We take great pride in being able to offer so valuable a collection of perfect-flowering Strawberries as are here embodied in the Rogers' Big 4 "Jr." We have no better varieties of their class, nor do we think it possible to select four better perfect-flowering sorts from among the hundreds of varieties now on the market. No other varieties are needed to fertilize any of these, as each is in itself a perfect berry.

**ENHANCE.** The king of late dark Strawberries, and worthy of a place among the Big 4 "Jr." It is truly a valuable berry, and has come to stay, as it has succeeded over a large part of the country. Fruit runs large, and when fully ripe is of the darkest color and has a fine appearance, which is set off by the large green calyx. Very firm and a good shipper. Ripens late in the season, stands up well, and holds its shape when canned. Plant is a very strong grower, and shows no sign of rust.

*Read what others say about the Enhance Strawberry. Note the wide range of country over which the Enhance has succeeded and made a place for itself.*

E. S. Goiff, of the Wisconsin Experiment Station, says: "The Enhance Strawberry ripened here June 23rd, about a week later than the earliest varieties. It can be harvested by early July 5th, and during its season was quite productive. Fruit medium to large, very rich scarlet, firm, of excellent quality, keeping very well. I regard it as one of our best late Strawberries."

J. G. Harrison & Sons, of Maryland, the extensive fruit-growers, say: "In regard to the Enhance Strawberry, we consider it as one that has come to stay. Of large size and very productive. Strong growers, and the perfect blossom makes it more desirable. One of the best to fruit the Bubach No. 5. It is a first class berry."

W. J. Green, of the Ohio Experiment Station, says: "I think highly of the Enhance Strawberry. It is vigorous, healthy and productive; a good market sort, good pollenizer, good shipper, and excellent for canning."

Slaymaker & Son, prominent Delaware fruit-growers, say: "We are very much pleased with the Enhance. It has improved each year that we have fruited it, and with us is a large, vigorous plant with bright, clear foliage. Its fruit is large, bright in color, very good in flavor, and among our very best berries."

Other states in which the Enhance has been tested by leading fruit-growers and agricultural experiment stations, and which consider it worthy of special mention, are: Indiana, Massachusetts, New York, Pennsylvania, Louisiana, Michigan, Oregon, California.

Price, 40 cts. per dozen, 75 cts. per 100, $3 per 1,000.

**WOOLVERTON.** We have yet to hear the first complaint, or anything but good words, for this noble variety. Ask Matthew Crawford, the Ohio Strawberry king, or any agricultural experiment station, if you wish, what they think of this variety. Everybody likes the Woolerton. Fruit is large and somewhat like the Bubach, but better in quality, firmer, and a little later in ripening. Blossoms perfect, and a valuable variety to fertilize others.

Matthew Crawford says: "I have fruited the Woolerton in both hills and matted rows, and am convinced that it is a variety of great merit. Wherever it has been tested it has made a good record. It is a splendid grower, remaining green and healthy all summer, sending out a good number of runners, and bearing abundantly. The blossom is perfect, and it remains in bloom a long time; in fact, it always matures a part of its crop before it is done blooming. This is a very valuable characteristic, because it will prevent any great loss by a late frost, and also makes it a rare variety to plant with pistillates. The fruit is very large, resembling the Bubach in form. The color is a bright, beautiful red, and the quality is good."

W. F. Allen, Jr., says: "Woolerton is, I believe, the best large perfect-blossom variety grown. Texture firm, quality good, and one of the best, if not the very best of all, to fruit large pistillate varieties, such as Bubach, Haverland, etc."

Price, 40 cts. per doz., $1 per 100, $5 per 1,000.
GOVERNOR HOARD. This variety originated in Wisconsin. The plant is strong, healthy, free from rust and very productive. Blossoms perfect. Fruit is large, roundish, conical, and of a deep, brilliant red. Flesh firm, and of a rich, agreeable flavor. Ripens quite early.

A prominent Strawberry grower and authority on Strawberries gives his opinion of the Governor Hoard: "I have fruited the Governor Hoard under various conditions for four years, and have no hesitation in recommending it as a variety of great promise. It has been tested ten years, and during that time has been as free from rust as any variety ever grown, and has shown no weakness of any kind. It is a seedling of the Sharpless, and resembles its parent in healthy, vigorous growth. It sends out an abundance of runners, and the last ones to root in the fall bear well the next summer. The blossom is perfect, and the fruit is produced in great abundance on tall, stout fruit stems. Fruit is of large size, and with a beautiful green calyx that turns back towards the stem. The color is a deep, brilliant red, and ripens all over. The flesh is firm, and of very superior flavor. It has acid enough to be agreeable, and so rich that sugar is scarcely necessary. Its beautiful form and color, with its high flavor and reversed calyx, render it one of the very best to be served with the hulls on, to be eaten out of hand."

Price, 40 cts. per doz., $1 per 100, $4 per 1,000.

SAUNDERS. Last, but not least, is "Saunders, the Canadian." Introduced by John Little, of Canada, where it is the best berry he has, all things considered; and at all points this side of "Uncle Sam's Line," it has, by its many merits, won a place among the very best. Fruit is very large, conical, slightly flattened, dark, glossy red, flesh same color, and excellent quality. Very strong grower, and one of the heaviest bearers among the large berries. Season medium to late. Ranks with Woolverton.

Our friend Matthew Crawford thinks well of the Saunders. He says: "The Saunders is a Canadian berry of great value for the market grower. I wish all would test it, as it is among the most desirable. The plant is large, vigorous and free from rust, and is as healthy and hardy as any ever sent out. It makes many runners, has a perfect blossom, and is enormously productive. In this respect it excelled all others on my place in 1890, and was the wonder of all who saw it. The fruit is very large, conical and slightly flattened, and often has a depression on one or both sides. It is deep red, and remarkably glossy. The flesh is of the same color, and has a sprightly, agreeable flavor."

Price, 40 cts. per doz., $1 per 100, $4.50 per 1,000.

THERE'S MONEY IN IT!

Raspberries.

Raspberries are of two classes, viz., the cap varieties, which are propagated by layering-tips, and the red varieties, by suckers or root-cuttings. The latter are planted in rows 6 feet apart and 3 feet in the rows, requiring about 2,400 plants per acre, while the caps spread more, and should be planted in rows one foot further apart, requiring 2,000 plants to set an acre. It is difficult to say which are the more profitable, but for home use it is best to have a succession of each. For Philadelphia markets the reds pay the better, but when sold for evaporating, the caps are preferred, and also for shipping long distances. Beginners would do well to make inquiry before planting as to which their markets demand.

Brandywine. During the past two seasons the demand for the Brandywine has been increasing, owing to its great hardiness and productiveness, and being such an excellent shipper. Planted side by side with Cuthbert and Marlboro, even on poor land, it has produced twice as many berries, and is as hardy as an oak. We have heard from a great many Raspberry growers during the past few months, and in the west, north and south all speak well of the Brandywine. The fruit is of good size and very firm, and is the best red ever introduced for shipping. Good quality when fully ripe. If you have not tried the Brandywine in your section, give it a trial, and in doing so, plant enough to make it an object to take care of them. 35 cts. per doz., $1 per 100, $7 per 1,000.

Cuthbert. A leading market sort in a large part of the country where not too cold. Fruit is large, of fair quality and productive, 30 cts. per doz., $1 per 100, $5.50 per 1,000.
RASPBERRIES, continued.

Ohio. (Cap.) This variety is a splendid sort for drying, and is grown extensively for that purpose. Stands next to Gregg for general purposes among the caps. Fruit large, glossy black and of good quality. Season medium. 35 cts. per doz., $1 per 100, $7.50 per 1,000.

Shaffer’s Colossal. (Cap.) One of the best sorts for table use and canning. Berries are large, of a dull purplish, unattractive color, making its less valuable as a market sort, but it is one of the best to plant for home use. 45 cts. per doz., $1.50 per 100, $12 per 1,000.

Souhegan or Tyler (Carman or Cromwell), (Cap.) These four sorts are about one and the same. The Souhegan is still popular in some sections, but it is quite probable that it will be set aside for the Pioneer. 30 cts. per doz., 90 cts. per 100, $7.50 per 1,000.

Progress, or Pioneer. (Cap.) This variety originated in the fruit-growing section of South Jersey, where Souhegan at the time was the most popular sort, but it has now been almost entirely discarded where Pioneer is known, owing to its great superiority in firmness and productiveness; and in addition to these important points, the fruit is larger, the plant a stronger grower, and much hardier. 40 cts. per doz., $1 per 100, $7.50 per 1,000.

Golden Queen. This is a very popular and good yellow Raspberry for the garden. A trial will determine its selling qualities in one’s particular market. Fruit is nearly as large as Cuthbert, of which it is a sport. Fine appearance, finest quality, hardy and productive. Its superior quality over ordinary sorts makes it especially valuable for table use. 40 cts. per doz., $1.50 per 100, $12 per 1,000.

Gregg. (Cap.) This variety has been for years, and continues to be, in many sections, the most popular black-cap ever introduced. 35 cts. per doz., $1 per 100, $7.50 per 1,000.

Palmer. If you want a first-class black-cap for the garden, of excellent quality, plant the Palmer. Berries not of extra large size, but oh, how good! Fruit black as coal, and ripens early, continuing after Gregg is gone. 50 cts. per doz., $2 per 100.

Thompson’s Early Prolific. For the garden the Thompson’s Early Prolific holds among the reds the same place, in our estimation, that the Palmer does among the black-caps. Fruit medium size, and excellent for canning. The finest quality and earliest of all red Raspberries. 40 cts. per doz., $1.75 per 100.

NEW RED RASPBERRY—ROYAL CHURCH.

NEW RED RASPBERRY—Royal Church. Perhaps no Raspberry has ever been introduced under so favorable circumstances, or recommended so highly by the most eminent authorities throughout the country.

Prof. H. E. VanDeman, United States Pomologist, of Washington, D. C., says: “Royal Church is one of the best of the red varieties. The fruiting branches are long and heavily loaded with green and ripe fruit. Berry large, round, juicy and of rich flavor.”

Prof. W. J. Green, of the Columbus, Ohio, Experiment Station, says: “Royal Church is large and of fine quality.” In his bulletin for 1891 he says: “Plants vigorous and productive. Berries large, dark crimson, moderately firm, excellent quality. A very promising variety.”

Geneva (N. Y.) Experiment Station says: “It is earlier than Cuthbert, more productive, hardy. As good as Brinckte’s Orange in quality.”

Extra large plants, 25 cts. each, $2.50 per doz.
Blackberries.

Blackberries require nearly the same culture as Raspberries, but rows should be made about eight feet apart, and plants set four feet apart in the row. During the summer pinch back the canes, or cut off with a knife when three feet from the ground. This will make them grow stocky and make branches. They should also be well pruned in winter. Blackberries are very wholesome. Don't forget that they make delicious pies, and are excellent when canned.

Prices per dozen are postpaid. To prices per 100, add 40 cts. for postage, except where noted.

**Erie.** A fair proof of the merits of any fruit is to be found in the fact that after it has been on the market four or five years there is still an increasing demand for it. This is the case with the Erie Blackberry. The Erie is a very hardy, large, late berry of good quality, productive and profitable. Fruit rounded in form, and of fine appearance. Foliage healthy, free from rust. This is one of the good things of which fruit-growers should start a plantation. Root-cutting plants, 50 cts. per doz., $2 per 100, $18 per 1,000.

**Wilson Jr., or Wilson Early.** This is the leading early Blackberry, and more largely planted than all others combined. The bush is a low grower, and well adapted to laying down for covering in winter in cold sections where not hardy, although it is planted in Michigan by the hundred thousand. Fruit large and delicious. 35 cts. per doz., 85 cts per 100, $6 per 1,000.

**Kittatinny.** A very popular sort for general planting, and still growing in popular favor, especially for family use. Very strong grower; berries large and of fine flavor; exceedingly productive. Season extends from medium to very late. Rooted cutting plants, 35 cts. per doz., $1 per 100, $7 per 1,000.

**Early Harvest.** One of the earliest Blackberries, and a favorite in sections where hardy, which is generally throughout the country. Especially valuable at the south, on account of its earliness. Fruit medium size. 35 cts. per doz., $1 per 100, $7.25 per 1,000.

**ELDORADO.** (New.) Originated in Ohio, and has stood severest winters without injury. Quality excellent; no hard core; a good keeper and shipper. The following letters are worth reading, and speak well for the merits of the berry:

"The Eldorado was noted last year, and is of much promise; so much so that a special colored plate has been made. It is an oblong, irregular berry, of large size, fruiting in pendulous, slender, hairy spikes, with few thorns. Color black; flesh deep crimson, with tender core; flavor sweet, rich quality, and very good."—H. E. Van Deman, U.S. Dept. of Agriculture.

"I find Eldorado to be a large, oblong, conical berry, composed of large drops containing small seed, and adherent to a very small core. The berry is juicy, and the flavor sweet and rich. If it is hardy, it is worthy of introduction."—H. E. Van Deman.

"Samples of Eldorado at hand, and have received the photo of the cluster. It is certainly far superior to Snyder in size and quality, and if as hardy, will be a valuable acquisition."—H. E. Van Deman, Washington, D. C., July 25, 1893.

**From the Ohio Experiment Station:** "Eldorado is the most promising hardy Blackberry. It appears to be as hardy as Snyder, is larger and of better quality. Snyder, Ancient Briton and Eldorado are the only perfectly hardy sorts in central Ohio.—W. J. Green, Hort."

40 cts. each, 3 for $1, $3 per doz., 25 for $5.

**Snyder.** A valuable sort; very hardy, and being planted largely at the north on account of hardiness. The fruit is of medium size, and is borne in heavy crops at about mid-season. Its flavor is sweet and rich. 50 cts. per doz., $1.25 per 100, $9 per 1,000.

**LUCRETIA DEWBERRY.** One of the large-growing, trailing Blackberries. Valuable both for home use and market. Perfectly hardy, healthy and productive, with very large, showy flowers. The fruit, which ripens early, is often 7½ inches long by 1 inch in diameter soft, sweet, luscious throughout. 40 cts. per doz., $1.25 per 100, $10 per 1,000.

We have over 100,000 Blackberry plants of the above leading sorts, and large planters should write for special prices.
Currants.

Plant in rows 5 feet apart and 4 feet in the row, in good soil. A more profitable crop will be hard to find. They are benefited by partial shade. The best patches of Currants we have seen were in orchards. When troubled with worms, a very easy and effective remedy is to dust common land-plaster over bushes affected, early in the morning, while the dew is on. In the fall trim out dead wood, and cut back all young shoots but two or three. A few Currant bushes should be in every garden, and the farmer who plants Currants largely for profit has a level head. It is surprising to see the amount of money that can be taken from a small patch of Currants, and with such a trifling expense. $400 per acre is no unusual amount.

**FAY’S PROLIFIC.** The Fay’s Prolific has been cultivated for several years alongside the best and most popular varieties, and has sustained all claims made for it. More productive than Cherry, more uniform, with large stems, and fruit less acid. The fruit is the largest of any red Currants. We have a large stock of this valuable Currant. Strong, 2 years old, $1 per doz., $6 per 100, $50 per 1,000.

**NORTH STAR.** This new Currant is now attracting much attention. We have seen it fruiting, and it certainly is a wonderful Currant to bear. Fruit is of fair size, bright red and very productive. Claimed to be the sweetest Currant grown. 35 cents each, $3.50 per doz.

**GENERAL LIST.**

**Victoria.** Aside from the Fay’s Prolific, the Victoria is one of the most profitable red Currants. Fruit is of good size, and ripens later than other sorts, and on this account commands better prices. Very productive, and of excellent quality.

**Cherry, or La Versailles.** The favorite variety for general planting; profitable and productive; berries large.

**White Grape.** The best white variety, and of such fine quality that it is valuable for the house garden; berries white, bunches long and full; good grower, and productive. Every garden should have a few White Grape Currants.

**Lee’s Prolific.** Of the European varieties, this is the best yet introduced. Earlier, better and more productive than Black Naples. Berries large, and good bunches.

**Red Dutch.** Similar to Victoria, but earlier. A very good Currant.

**PRICES OF GENERAL LIST OF CURRANTS.**

Special prices on large orders. Please write us early; we have a large stock. In writing, give number and age of each variety wanted, and save delay.

**Dwarf Juneberry.**

The Dwarf Juneberry resembles the Currant in growth and habit. The fruit, which is bluish black, similar to the swamp huckleberry, is borne in clusters in great abundance. The flavor is rich, subacid and delicious. Ripens in June. The plant is entirely hardy and easy of culture.

**Improved Dwarf.** 10 cts. each, 75 cts. per doz.
CHOICE ORNAMENTALS.

We grow largely a full assortment of hardy ornamental trees and shrubs, but for want of space cannot offer them all here. The following are the choicest of the class, and every door-yard should have something of the kind to make home what it should be—"the pleasantest place on earth."

SHADE TREES.

Cut-Leaved Weeping Birch. A tall, slender tree, with graceful, drooping branches, pure white bark in winter, and delicately cut leaves. The finest of all trees. Fine, strong trees, 7 to 9 ft., 75 cts. each.

Silver Maple. 10 ft., 75 cts. each.

Cut-Leaved Silver Maple. 75 cts. each.

Norway Maple. 8 to 10 ft., $1.25 each.

Sugar Maple. 8 to 10 ft., $.75 each.

Catalpa. 6 to 8 ft., 50 cts. each.

Carolina Poplar. 10 ft., 40 cts. each.

EVERGREENS.

DWARF ROCKY MOUNTAIN CHERRY AND HARDY ORANGE

Norway Spruce. 3 ft. 40 cts. each.

Hemlock Spruce. 2 to 3 ft. 35 cts. each.

Arbor-vitae. Assorted 50 cts. each.

ARE VERY CHOICE ORNAMENTALS.

Hardy Flowering Shrubs.

Hardy Flowering Shrubs are necessary for the proper ornamentation of a lawn or garden. They develop more quickly than any other class of trees, and are, therefore, indispensable for filling a new lawn, where it is desirable to get something to make a show as quickly as possible. In laying out new places they may be dotted about in groups, or as single specimens in many nooks and corners, which at first look bare, but which will eventually be occupied when the other trees and evergreens are fully developed. As the latter increase in size, the shrubbery may be thinned out to make room for them.

AMYGDALE communi flore pleno (Double-flowering Almond). One of the most beautiful early-flowering shrubs, bearing lovely pink rosettes all over the bush. 25 cts. each; heavy, 50 cts.

Calyxanthus floridus (Sweet Shrub). An old garden favorite, valued for the fragrance of its chocolate-colored flowers. 25 cts.; mail, 10 cts.

DEUTZIA crenata plena (Double Pink Deutzia). All the Deutzias are valuable and very profuse bloomers in June. This is one of the prettiest tall-growing varieties. 20 cts.; mailing size, 10 cts. each, $1 per doz.

Borysthia viridissima (Green-barked Golden Bell). More erect and shrubby in habit, with a light green bark. 25 cts.; mailing size, 10 cts.

SPIREÆ (Meadow Sweet). Among the varieties of Spirea are found some of the most beautiful and useful of our hardy flowering shrubs. 25 cts.; mailing size, 10 cts.

Syringa vulgaris (Common Purple Lilac). 25 cts.

Weigela rosea. Pretty rose colored flowers, freely produced. 25 cts.; mailing size, 12 cts.

The above collection of ten of the finest Hardy Flowering Shrubs, worth $2.45, we will send for $1.85; or, one each of mailing size, by mail, postpaid, for $1.

Hardy Roses.

We have a fine collection of Hardy Roses, and for the little they cost they, perhaps, give as much pleasure as anything in the ornamental line that could be bought.

Leading varieties of hardy everblooming Tea Roses, large plants, 25 cts. each; large plants of hardy Hybrids, 35 cts. each.

When you send your order for other stock, put in a dollar for our "Surprise Collection" of surplus Choice Flowering Shrubs.
### Mailing Department

**For the accommodation of those who prefer stock sent by mail, we have arranged the following Collections, postpaid. The prices under head of "Catalogue Rates" will be the cost of these articles when ordered separately from the Collection. Except where noted in Catalogue, do not order any stock sent by mail outside of the varieties in this list. Other articles may be ordered separately with any one of these, at the prices named.**

These varieties are all reliable, and we are not trying to work off a lot of "snag stock." It will all be young and well-rooted. Do not ask for any change in these Collections, as we cannot vary from them unless we run short of a variety.

In ordering, give the number and amount of Collection only, and if ordered early, we can ship same day, if desired. We are fully prepared. Prompt shipment and safe arrival of goods guaranteed. Order early!

In larger trees, by express, we will send this Collection for $2, if ordered early, please.
ROGERS’ BIG EXPRESS COLLECTION.
By Express or Freight.

The Best $4.50 Collection ever Offered.

It is all solid “meat.” Nothing put in to “fill up” and make it look “big.” Can’t be bought anywhere else, singly, for twice the money, in same quality stock. Contains more solid, substantial varieties than any collection offered by any firm in the United States.

1 Garden Gem Apple, 6 Holt’s Mammoth Sage,
1 Schmidt’s Bigarreau Cherry, 4 Erie Blackberry,
2 Whinnery Late Red Apple, 3 Lucretia Dewberry,
1 Clapp’s Favorite Early Pear, 6 Grape Vines (3 or 4 best sorts),
1 Bartlett Pear, 1 English, or Persian Walnut,
1 Japan Plum, Abundance, 1 Japan Mammoth Chestnut,
2 Japan Plum, Satsuma, 3 Hardy Orange,
2 Hardy Frost-Proof Peach (see our “Big 3”), 3 Dwarf Rocky Mountain Cherry (see descrip.),
2 Peach Trees, our selection (good ones), 4 Hardy Shrubs,
1 Champion Quince, 2 Double Flowering Peach,
75 Barr’s Mammoth Asparagus (see cover), 12 Raspberries (best sorts),
4 Rhubarb, 2 Russian Apricot.

If ordered before April 1st, will include 100 Strawberry plants, Big 4 and Big 4 Jr.

The “Dandy” $2.50 Collection.
By Express.

1 Garden Gem Apple (see cover),
50 Barr’s Mammoth Asparagus (see cover),
1 Schmidt’s Bigarreau Cherry “
1 Whinnery Late Red Apple,
1 Idaho, or Wilder Early Pear,
1 Abundance Plum,
1 Ellison Peach,
1 Orange Quince,
2 Dwarf Rocky Mountain Cherry,
2 Hardy Orange,
3 Lucretia Dewberry,
4 Hardy Shrubs,
2 Industry Gooseberry.

If ordered before April 1st, will include 50 Strawberry plants free, Big 4.

CLUB ORDERS.

Here is a chance to try some of the new fruits without any expense.

To the Club-raiser who gets up a $20 Club Order among his neighbors, we will send FREE the following, either by express or freight:

50 Barr’s Mammoth Asparagus Roots,
1 Japanese Mammoth Chestnut,
1 English, or Persian Walnut,
